PROFESSIONAL SUMMARY

IT Specialist with 13+ years supporting manufacturing IT environments, now working full-time as an independent, self-taught software developer. At Toyota Boshoku (2012–2026), I administered enterprise systems — Windows, Active Directory, virtualization, AS/400 integration, cybersecurity incident response — and independently built the VB.NET applications, automated reporting, and KPI systems that ran the floor, without a formal development background. I taught myself Swift and SwiftUI and shipped **Inner Whisper**, a live iOS app on the App Store, under my own label, **Moving Truth** (apps.movingtruth.com). AI tools are core to how I build daily, and I'm currently designing a framework to orchestrate multiple AI agents from different providers on shared tasks.

TECHNICAL SKILLS

Programming & Development: VB.NET · Swift & SwiftUI · SQL Server & Database Management · PLC Integration

AI & Automation: AI-assisted development workflow (daily use) · building a personal multi-agent orchestration framework across AI providers · agentic/prompt-driven automation

Systems & Platforms: Windows Administration & Support · macOS & Linux Administration · SSRS (Extensive) · Active Directory & Group Policy · Virtual Environment Management · Remote Administration · IBM AS/400 with DB2 · Industrial Control Systems Integration · Cybersecurity & Threat Detection

Specializations: Custom application development · automated reporting & data distribution · KPI dashboards · Health & Safety compliance systems · real-time PLC data capture

PROFESSIONAL EXPERIENCE

Independent Software Developer — INNER WHISPER — LIVE ON THE APP STORE

May 2026 – Present

Moving Truth (self-employed) · apps.movingtruth.com

Designing, building, and shipping software independently, full-time, after 13+ years in enterprise IT — self-taught, outside any formal development training.

- **Inner Whisper (iOS):** Self-taught Swift & SwiftUI and independently designed, built, and shipped a native iOS app — curated quotes, favorites, custom theming, configurable notifications, on-device encryption — published solo under my own label, Moving Truth
- **Multi-Agent AI Orchestration Framework:** Designing and building a personal system to coordinate multiple AI agents from different providers (e.g. Claude, GPT-based agents) working together on shared tasks
- **AI-Assisted Development:** AI coding tools are core to my daily workflow — used to design, build, and ship faster across every project

IT Specialist

February 2012 – May 2026 (14 years)

Toyota Boshoku · Elmira, Ontario

Comprehensive IT support for office and production environments; also sole developer for custom business applications.

- **Application Development:** Independently designed and developed multiple business-critical VB.NET applications — KPI tracking & dashboards, Health & Safety incident reporting, production sequencing & workflow management, HR kiosk interfaces, inventory tracking
- **Industrial Integration:** Built interfaces between custom applications and PLCs for real-time production data capture and reporting
- **Advanced Reporting & Analytics:** Developed automated SSRS reporting for production metrics, Health & Safety summaries, and operational dashboards
- **Enterprise System Management:** Remote administration across multiple locations — security, updates, performance across virtual and physical environments
- **Cybersecurity & Incident Response:** Identified security breaches and malicious email; led key parts of disaster recovery from a major cybersecurity event, including enhanced protocols and system restoration
- **Legacy System Integration:** Maintained and integrated IBM AS/400 DB2 databases with modern applications
- **Data Processing & Distribution:** Automated data collection, processing, and report distribution, cutting manual effort and improving accuracy

EDUCATION

Network Engineering & System Administration

Conestoga College, Kitchener, ON

2010 – 2011

PROFESSIONAL DEVELOPMENT

- Deepening Swift & SwiftUI expertise through continued shipping
- Pursuing Ignition Platform Certification (Industrial Automation)

CORE COMPETENCIES

Independent Problem Solving & Self-Directed Learning: Delivers complex technical solutions with minimal supervision; VB.NET, SSRS, PLC integration, cybersecurity, and Swift/SwiftUI were all learned independently.

Rapid Technology Adoption & Process Automation: Quickly learns and implements new technologies, including AI-assisted tooling; expert at identifying inefficiencies and building the automated systems that fix them.

Cross-Functional Collaboration & Project Management: Effective liaison between IT, HR, production, and management teams; manages multiple concurrent projects from conception to deployment, at work and independently.
