# Robin O'Brien

Technology Strategy | AI Enablement | Operational Systems

Palmerston, Ontario | 519.635.2628 | robin.c.obrien@icloud.com | robinobrien.me | apps.movingtruth.com | github.com/MovingTruth

## PROFESSIONAL PROFILE

Technology professional with a 14-year foundation in manufacturing IT and business-critical software. Translates operational problems into dependable applications, reporting, automation, infrastructure, and practical modernization plans. Now designs and ships independent software while developing human-governed approaches to AI-enabled work. Brings structure to complexity, communicates technical choices clearly, and carries solutions from discovery through implementation, adoption, and support.

## STRATEGIC FIT

- **AI enablement and workflow automation:** designs reviewed, human-controlled AI workflows that improve capability without treating AI output as automatically trustworthy.
- **Technology roadmapping and modernization:** evaluates business value, dependencies, security, maintainability, adoption, and operational risk before sequencing solutions.
- **Stakeholder leadership:** turns factory-floor and business complexity into clear requirements, priorities, decisions, ownership, and actionable reporting.
- **Operational maturity:** replaces manual and error-prone processes with scalable applications, data pipelines, dashboards, automation, documentation, and durable support practices.

## PROFESSIONAL EXPERIENCE

### Independent Software Developer / Product & AI Systems Builder

Moving Truth | Self-employed | May 2026 – Present

- Own product direction, architecture, design, development, testing, accessibility, privacy, release, documentation, and iteration for an independent family of applications and web products.
- Designed, built, and independently published *Inner Whisper* and *Inner Thought*, native SwiftUI applications available on the App Store; delivered both from initial concept through production release.
- Established reusable product principles across five app concepts, including privacy by design, accessibility from the beginning, calm interaction, and maintainable shared patterns.
- Built multilingual web and product experiences, deployment workflows, localization systems, accessibility improvements, and supporting automation.
- Developing the Moving Truth AI Bridge, a private human-governed framework for coordinating multiple AI providers through scoped tasks, approvals, authority boundaries, durable records, file leases, audit trails, independent review, and verified handoffs.

### IT Specialist & Principal Application Developer

Toyota Boshoku | Elmira, Ontario | Feb 2012 – May 2026

- Supported office and production technology while serving as the principal developer of custom internal applications in a high-availability manufacturing environment.
- Designed and maintained business-critical VB.NET applications for KPI tracking, health and safety reporting, production sequencing, HR kiosks, inventory, and workflow management.
- Connected custom applications to PLCs and SQL Server for reliable, real-time capture of production counts, machine status, and quality data.
- Replaced labour-intensive reporting with scheduled SSRS workflows and automated distribution; one recurring process fell from 2–4 hours to under 5 minutes while improving consistency and visibility.

Palmerston, Ontario | 519.635.2628 | robin.c.obrien@icloud.com | robinobrien.me | apps.movingtruth.com | github.com/MovingTruth

## TOYOTA BOSHOKU EXPERIENCE — CONTINUED

- Administered Windows, Active Directory, Group Policy, virtual and physical environments, remote systems, and IBM AS/400 DB2 integrations across multiple locations.
- Identified security threats and supported recovery from a major cybersecurity incident, including restoration work and stronger operating protocols.
- Worked directly with production, HR, health and safety, management, users, vendors, and technical teams to translate operational problems into maintainable solutions.
- Built and supported resilient 24/7 KPI, inventory, safety, reporting, and production-data systems with strong error handling, troubleshooting, monitoring, and operational follow-through.
- Documented decisions, requirements, ownership, and support practices so improvements could be adopted and sustained beyond initial delivery.

## SELECTED IMPACT

- **Automated reporting:** transformed recurring manual reporting from hours of compilation into scheduled, reliable output produced in minutes.
- **Production visibility:** integrated PLC and SQL Server data to replace manual entry and give management timely operational information.
- **Operational applications:** delivered production-grade tools used continuously for KPI, inventory, safety, HR, sequencing, and workflow needs.
- **Cybersecurity and resilience:** contributed to threat identification, incident recovery, restoration, and stronger operating protocols in a real production environment.
- **Digital product delivery:** independently carried two privacy-conscious native applications from concept through App Store release while establishing scalable patterns for a broader product portfolio.
- **AI governance:** designed structured controls for scope, approvals, authority, auditability, concurrent work, evidence, and verification across multiple AI providers.

## CORE CAPABILITIES

**Strategy & Delivery:** technology assessment; modernization planning; workflow analysis; requirements discovery; roadmap sequencing; operational maturity; documentation; adoption support

**AI & Automation:** AI-enabled workflows; human-in-the-loop governance; multi-agent coordination; process automation; Python; prompt and verification design; AI-assisted development

**Applications & Data:** VB.NET; C#; Swift; SwiftUI; SQL; Python; SQL Server; SSRS; KPI dashboards; APIs and system integration; Git; reporting and data pipelines

**Infrastructure & Industrial IT:** Windows; macOS; Linux; Active Directory; Group Policy; virtualization; IBM AS/400 DB2; PLC integration; OPC/Modbus; remote administration; 24/7 operations

**Security & Reliability:** incident response; threat identification; recovery support; privacy by design; monitoring; resilient application design; controlled access; supportability

**Leadership & Communication:** cross-functional coordination; management-ready explanations; recommendation writing; prioritization; calm issue ownership; end-to-end delivery

## EDUCATION & DEVELOPMENT

**Network Engineering & System Administration**
Conestoga College | Kitchener, Ontario | 2010 – 2011

- Ongoing independent development in AI systems, software architecture, cybersecurity, industrial automation, and modern application delivery.
- Ignition Platform certification studies.

## PORTFOLIO

**Professional portfolio:** robinobrien.me | **Applications:** apps.movingtruth.com | **Public development:** github.com/MovingTruth
