Robin O'Brien

Independent Software Developer & IT Specialist

Listowel, Ontario · 519.635.2628 · robin.c.obrien@icloud.com · robinobrien.me · github.com/imposterSyndromium

PROFILE

Practical software developer with a 14-year foundation in manufacturing IT. Builds dependable applications, reporting systems, and automation that connect technical infrastructure to real operational needs. Now designing and shipping independent native apps under Moving Truth, including **Inner Whisper**, available on the App Store.

CORE STRENGTHS

Software: VB.NET, Swift, SwiftUI, C#, SQL, Python
Data: SQL Server, SSRS, KPI dashboards, automation
Systems: Windows, macOS, Linux, AD, virtualization
Industrial IT: PLC integration, AS/400, 24/7 operations

EXPERIENCE

Independent Software Developer

May 2026 - Present

Moving Truth · Self-employed

Owns product direction, design, development, testing, accessibility, privacy, and release for an independent family of apps.

- Designed, built, and independently published **Inner Whisper**, a native SwiftUI app with favourites, custom themes, configurable reminders, offline operation, and on-device protection for personal entries.
- Established reusable product principles across five app concepts: privacy by design, accessibility from the beginning, calm interaction, and no attention-pressure mechanics.
- Developing a human-governed framework for coordinating multiple AI systems with explicit authority boundaries, durable memory, evidence, and independent review.

IT Specialist

February 2012 - May 2026

Toyota Boshoku · Elmira, Ontario

Supported office and production technology while serving as the principal developer of custom internal applications.

- Designed and maintained business-critical VB.NET applications for KPI tracking, health and safety reporting, production sequencing, HR kiosks, inventory, and workflow management.
- Connected custom applications to PLCs and SQL Server for reliable, real-time production data capture and reporting.
- Replaced labour-intensive reporting with scheduled SSRS workflows and automated distribution, reducing manual effort while improving consistency and visibility.
- Administered Windows, Active Directory, Group Policy, virtual and physical environments, remote systems, and IBM AS/400 DB2 integrations across multiple locations.
- Identified security threats and supported recovery from a major cybersecurity incident, including restoration work and stronger operating protocols.
- Worked directly with production, HR, health and safety, and management teams to turn operational problems into maintainable technical solutions.

ADDITIONAL CAPABILITIES

Development: application architecture · API and system integration · Git · AI-assisted development

Operations: incident response · remote administration · threat detection · process improvement

Working style: self-directed learning · cross-functional communication · end-to-end ownership

EDUCATION

Network Engineering & System Administration

Conestoga College
Kitchener, Ontario · 2010-2011
